## Question 1

## How to Attempt?

## Unique Digits Count

Write a function to find the count of unique digits in a given number N. The number will be passed to the function as an input parameter of type int.

**Assumption:** The input number will be a positive integer number  $\geq 1$  and  $\leq 25000$ .

For e.g.

If the given number is 292, the function should return 2 because there are only 2 unique digits '2' and '9' in this number

If the given number is 1015, the function should return 3 because there are 3 unique digits in this number, '1', '0', and '5'.
